DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 05/07/2007 has been entered.

Election/Restrictions

2. This application still contains claims 4, 10, 11, 18, 24, 25 and 33-50, drawn to an invention nonelected with traverse in Paper No. 04/27/2006.

3. Due to amendments and persuasive arguments by applicant, the previous rejections of record based on Moreau et al. have been overcome and are hereby withdrawn.

Claim Rejections - 35 USC § 102

4. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Art Unit: 1713

5. Claims 1-3, 5-9, 12-17, 19-23 and 26-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Anderson et al., for reason cited in previous actions.

Response to Arguments

6. Applicant's arguments filed 05/07/2007 have been fully considered but they are not persuasive.

7. Regarding Anderson et al, applicant argues that the recited "ranges are the 'approximate solids content, %' of each individual component, before mixing." And then goes on to argue that "The approximate solids content is the concentration of the solids in solution and the primary active ingredient in the component provides the desired effect (i.e., set delay, acceleration, or reduced amount of water) on the cementitious composition."

While the percentages in TABLE A are approximate solids content, the percentage are based on 100 % of the solids content of the admixture components, as evidenced by the fact that when each component is maximized, the total adds up to 100. This provides us with the ratio of the components. Applicant seem to be confusing the dosages, based on solid content, with the solids ration/percentage of the three components..

One of ordinary skill in the art would understand the approximate solids content % in table A as identifying the ratio of the three components, thereby meeting the claims.
